

MINNESOTA STREET CONDOMINIUMS, San Francisco, Ca.

Project completed at Rich Seyfarth Landscape Architect Role: Team Member

Project Information: This conversion transformed an industrial building into condominiums sited around 3 interior courtyards. Fountains are located at focal points, and raised planters for seating are used throughout. Rooftop garden technology was incorporated for the landscaping of the upper terraces. The landscaping on the exterior of the building included walls and steps to account for the grade change along the block.
